

PUBLIC HEALTH REPORTS

VOL. 37

OCTOBER 13, 1922

No. 41

INFANT MORTALITY IN THE BIRTH REGISTRATION AREA OF THE UNITED STATES, 1921.

A preliminary announcement of the Department of Commerce states that for the year 1921 the birth registration area of the United States shows a birth rate of 24.3 per 1,000 population, a record low death rate of 11.7 per 1,000 population, and a record low infant mortality rate of 76. For 1920, these rates were: Birth rate, 23.7; death rate, 13.1; and infant mortality rate, 86. The population of the birth registration area for 1921 is given as 70,425,705; the number of births, 1,714,261; the total deaths, 825,511; and deaths under 1 year of age, 129,588.

For the States in the birth registration area, the lowest 1921 infant mortality rate (51) appears for Oregon, and the highest (98) for Delaware. For cities of 100,000 population or more, the lowest infant mortality rate (50) appears for Portland, Oreg., and the highest (114) for Fall River, Mass.

The Department of Commerce announces that it will soon issue a bulletin, compiled by the Bureau of the Census, showing the number of births, the birth rates, and the infant mortality rates for the cities and States in the birth registration area for 1921, together with the figures for 1920 for comparison.

Birth rates and infant mortality rates for cities of 100,000 population or more, 1921.

PREPARATION AND ADMINISTRATION OF ARSPHENAMINE AND NEOARSPHENAMINE—SUPPLEMENTAL NOTE.

In the article "Preparation and administration of arspenamine and neoarsphenamine," published in Public Health Reports for August 4, 1922, on page 1870, paragraph H, it was recommended that the NaOH solution be kept in a rubber-stoppered "wax or paraffin lined bottle." The term "wax" refers to *pure paraffin* wax only. No other kind of "wax" should be used for coating the interior of the bottle which is to contain the NaOH solution.

THE NOTIFIABLE DISEASES.

PREVALENCE DURING 1921 IN STATES.

ANTHRAX, CEREBROSPINAL MENINGITIS, DENGUE, DIPHTHERIA, GONORRHEA, INFLUENZA, MALARIA, MEASLES, PNEUMONIA, POLIOMYELITIS, RABIES, ROCKY MOUNTAIN SPOTTED FEVER, SCARLET FEVER, SEPTIC SORE THROAT, SMALLPOX, SYPHILIS, TUBERCULOSIS (ALL FORMS AND PULMONARY), TYPHOID FEVER, AND TYPHUS FEVER.

The tables which appear on the following pages have been compiled from data furnished by the health officers of the several States, the District of Columbia, and insular possessions. The data for syphilis and gonorrhea were furnished by the Division of Venereal Diseases of the Public Health Service. The following table shows the States (including the District of Columbia and insular possessions) for which morbidity and mortality data were received:

Morbidity.	Mortality.	Morbidity.	Mortality.
Alabama.....	Alabama.....	Nevada.....	Nevada.....
Arizona.....	Arizona.....	New Hampshire.....	New Jersey.....
Arkansas.....	Arkansas.....	New Mexico.....	New Mexico.....
California.....	California.....	New York.....	New York.....

Mississippi.....	Mississippi. ¹	Wisconsin.....	Wyoming.....
Montana.....	Montana.....	Wyoming.....	
Nebraska.....	Nebraska.....		

¹ Data not given by months.

¹ Data given by quarters only.

As the prevalence of disease for the Provinces in the Philippine Islands was reported by quarters, the data for the Provinces and Manila are given in separate tables.

For the purpose of comparison with States, the data for New York City are given in a separate table.

The populations given in the tables and used in computing case and death rates were estimated as of July 1, 1921, unless otherwise indicated.

For most of the diseases four tables are given: (1) Medians, (2) morbidity, (3) mortality, (4) rates.

It is believed that the median gives a better idea of the usual conditions than does the arithmetical average, which has been used in some former publications.

In ascertaining the medians,¹ data for the years 1913 to 1920, inclusive, were used, but for many States information was not available for each of the eight years. The column headed "Number of years included" shows the number of years for which data were obtained.

In comparing the figures for 1921 with the medians for preceding years, it should be borne in mind that an increase in the number of cases reported may indicate that there were more cases of the particular disease in the State during 1921, or it may indicate that the cases were better reported by the physicians.

A relatively large number of reported cases of a communicable disease, as indicated by a high case rate (and more especially when accompanied by a relatively small number of deaths, as indicated by a low fatality rate), usually means that the health department of that State is active and that the cases of the disease are being well reported by the practicing physicians. It does not necessarily mean that the disease is more prevalent in that State than in other States. A high fatality rate may mean that the disease was unusually virulent in a State, that the physicians did not treat the disease in that State with the success usual elsewhere, or that the practicing physicians did not report all of their cases. On the other hand, an unusually low fatality rate may be due to the fact that the disease in the State was unusually mild, that the physicians treated it with unusual success, that the practicing physicians reported their cases satisfactorily, or that the registration of deaths was incomplete, or the assignment of the causes of death inaccurate.

¹ The median has been defined as the magnitude of the middle item in an array. If the numbers of cases reported are arranged so that the greatest number reported in any one year is first, the second greatest number is second, and so on, then the number of cases in the center of the array is the median. The following illustration shows the method followed when data for five years are available: In a State reporting 60 cases in 1915, 79 cases in 1916, 71 cases in 1917, 58 cases in 1918, and 53 cases in 1919, the median is 60 cases.

In some instances comparatively large numbers of cases of diseases reported in certain States may be due to the system of reporting rather than to unusual prevalence of the diseases. For instance, in Mississippi physicians report some diseases monthly to the State health officer, giving the number of cases occurring in their practice during the month. This method of reporting probably is responsible, in part, at least, for the comparatively large number of cases of certain diseases reported in Mississippi.

Tabulations of reported cases and deaths from communicable diseases, similar to the tables here presented, have been issued by the United States Public Health Service for the years 1912 to 1920, inclusive (reprints numbered 163, 208, 298, 345, 426, 505, 551, 643, and 681).

Summary.

DIPHTHERIA.

45 States, District of Columbia, Hawaii, and Porto Rico:	
Cases reported, 1921 (population, 101,221,366).....	204, 133
Cases reported, median, 1913 to 1920.....	121, 254
Cases per 1,000 inhabitants, 1921.....	2. 02
Cases per 1,000 inhabitants, median.....	1. 26
42 States, District of Columbia, Hawaii, and Porto Rico:	
Deaths registered, 1921 (population, 99,586,813).....	16, 304
Deaths per 1,000 inhabitants, 1921.....	. 16
Deaths per 100 cases, 1921.....	8. 07

MEASLES.

45 States, District of Columbia, Hawaii, and Porto Rico:	
Cases reported, 1921 (population, 101,221,366).....	280, 869
Cases reported, median, 1913 to 1920.....	364, 035
Cases per 1,000 inhabitants, 1921.....	2. 77
Cases per 1,000 inhabitants, median.....	3. 78
42 States, District of Columbia, Hawaii, and Porto Rico:	
Deaths registered, 1921 (population, 99,586,813).....	3, 829
Deaths per 1,000 inhabitants, 1921.....	. 04
Deaths per 100 cases, 1921.....	1. 39

POLIOMYELITIS (INFANTILE PARALYSIS).

40 States, District of Columbia, and Hawaii:	
Cases reported, 1921 (population, 87,974,414).....	6, 253
Cases reported, median, 1913 to 1920.....	2, 273
Cases per 1,000 inhabitants, 1921.....	. 071
Cases per 1,000 inhabitants, median.....	. 027
35 States, District of Columbia, and Hawaii:	
Deaths registered, 1921 (population, 84,473,222).....	1, 534
Deaths per 1,000 inhabitants, 1921.....	. 018
Deaths per 100 cases, 1921.....	24. 90

SCARLET FEVER.

45 States, District of Columbia, Hawaii, and Porto Rico:	
Cases reported, 1921 (population, 101,221,366).....	188, 603
Cases reported, median, 1913 to 1920.....	109, 806
Cases per 1,000 inhabitants, 1921.....	1. 86
Cases per 1,000 inhabitants, median.....	1. 14
42 States, District of Columbia, and Hawaii:	
Deaths registered, 1921 (population, 98,258,915).....	4, 606
Deaths per 1,000 inhabitants, 1921.....	. 05
Deaths per 100 cases, 1921.....	2. 47

SMALLPOX.

43 States, District of Columbia, and Porto Rico:	
Cases reported, 1921 (population, 100,284,351).....	99, 856
Cases reported, median, 1913 to 1920.....	57, 280
Cases per 1,000 inhabitants, 1921.....	1. 00
Cases per 1,000 inhabitants, median.....	. 60
41 States:	
Deaths registered, 1921 (population, 97,312,890).....	551
Deaths per 1,000 inhabitants, 1921.....	. 006
Deaths per 100 cases, 1921.....	. 56

TYPHOID FEVER.

44 States, District of Columbia, Hawaii, and Porto Rico:	
Cases reported, 1921 (population, 93,789,650).....	45, 673
Cases reported, median, 1913 to 1920.....	56, 231
Cases per 1,000 inhabitants, 1921.....	. 46
Cases per 1,000 inhabitants, median.....	. 60
41 States, District of Columbia, Hawaii, and Porto Rico:	
Deaths registered, 1921 (population, 97,155,097).....	9, 033
Deaths per 1,000 inhabitants, 1921.....	. 09
Deaths per 100 cases, 1921.....	19. 94

TUBERCULOSIS.

See p. 2578; also Weekly reports from States, p. 2568.

TYPHOID FEVER.

The column headed "Median for previous years" gives the median number of cases reported during the corresponding weeks of the years 1915 to 1921, inclusive. In instances in which data for the full seven years are incomplete, the median is that for the number of years for which information is available.

City.	Median for previous years.	Week ended Sept. 23, 1922.		City.	Median for previous years.	Week ended Sept. 23, 1922.

FOREIGN AND INSULAR.

HAWAII.

Plague—Honokaa.

Under date of September 14, 1922, the occurrence of three fatal cases of plague was reported at Honokaa, Hamakua district, Hawaii. The first case, bubonic, occurred in a Japanese school girl, 10 years of age, and terminated fatally August 27. The second case, also bubonic, occurred in a Filipino plantation laborer, and terminated fatally September 2 at Honokaa Hospital. The third case, septicemic, occurring in a Filipino woman, terminated fatally September 10, at Honokaa Mill Camp No. 1.

Plague-Infected Rat—Honokaa.

A rat found dead September 6, 1922, at Honokaa Plantation Camp No. 4, was reported positive for plague September 13.

JAMAICA.

"Alastrim."

The occurrence of "alastrim" has been reported in the Island of Jamaica as follows: Week ended September 2, 1922—10 cases, 9 in Portland Parish and 1 in St. Mary; week ended September 9—32 new cases, 16 in Portland and 16 in Manchester; week ended September 16—32 cases, 10 in Portland, 20 in St. Mary, and 2 in St. James.

EPIDEMIC IN PORTLAND PARISH.

According to information received from Kingston under date of September 29, 1922, an epidemic of "alastrim" in virulent form had broken out in the parish of Portland. It was stated that the local government was taking steps to control the outbreak. Transportation companies were requiring passengers for the United States and members of crews signed on to be vaccinated.

Typhoid Fever—Kingston and Vicinity.

During the three-week period August 27 to September 16, 1922, 7 cases of typhoid fever were reported in Kingston and 60 cases in the surrounding country.

JAPAN.

Cholera Epidemic—Tokyo.

Under date of October 4, 1922, cholera was reported epidemic in Tokyo, Japan.

Cholera—Yokohama.

Information dated October 5, 1922, states that cholera is present in Yokohama, Japan.

POLAND.**Communicable Diseases.**

Communicable diseases were reported in Poland for the 3-week period July 9–29, 1922, as follows:
